Summary

Flutter Developer with 2+ years of experience building and shipping production-grade mobile applications across iOS, Android, and web. Delivered end-to-end solutions including a multi-vendor e-commerce platform, an AI-powered fitness app, and a web-based HR system — all architected with Clean Architecture, BLoC/Cubit state management, and RESTful API integration. Experienced in Firebase, WebSockets, CI/CD pipelines, unit testing, and payment gateway integration. Collaborative team player with a track record of working alongside product, design, and backend teams to ship scalable, maintainable Flutter applications that drive real business impact.

Experience

العلا للأعمال المحدودة (ABC Company)

Remote

Flutter Developer

February 2025 - Present

- Architected and shipped a multi-vendor e-commerce platform (BWW Store + BWW Seller) to production, handling multiple vendors and daily active users across iOS and Android.
- Built a vendor dashboard with real-time order management, reducing vendor response time by 20% through optimized state management with Bloc (Cubit)
- Integrated Pusher for real-time push notifications, Apple/Google/Facebook OAuth, OTP authentication, and payment gateway processing.
- Applied Clean Architecture (data/domain/presentation layers) across the codebase, reducing average bug fix time and improving onboarding for new developers.
- Collaborated directly with product and QA teams in an Agile workflow.

TheDar.AI

Hybrid

Flutter Developer

January 2024 - November 2024

- Built high-performance mobile applications that supported core business operations and increased user engagement.
- Contributed across the full software development lifecycle, improving workflow efficiency and system reliability.
- Created a scalable web-based HR system using Flutter, enabling streamlined employee and process management.
- Enforced clean architecture standards and introduced performance optimization techniques to enhance maintainability.
- Coordinated with cross-functional teams, including product managers and backend engineers, to transform requirements into effective technical solutions.

Skills

Core Framework: • Flutter.

Programming Languages: • Dart • C++.

Mobile Platforms: • Cross-Platform Mobile Development (iOS - Android).

State Management: • BLOC • Cubit.

Architecture: • Clean Architecture • MVVM • OOP & SOLID Principles

Backend & APIs: • REST APIs • Firebase.

Device & App Features: • Push Notifications • In-App Purchases • Deep Linking • Camera Integration •

SQLite • App Flavors • Payment Gateway Integration • Google Maps • Firebase Analytics.

DevOps & Tooling: • Git & GitHub • CI/CD • Firebase Hosting • Fastlane.

Soft Skills: • Agile / Scrum • Cross-functional Collaboration • Problem Solving • Communication.

Projects

GeniePT - AI personal Trainer 🦾

Engineered GeniePT using Flutter, developing cross-platform mobile UI features, reusable widgets, responsive layouts, and AI-integrated user experiences. Implemented in-app purchases, automatic step counting, AI chat functionality, push notifications, and camera-based meal analysis, while improving application performance, managing state and navigation flows, debugging UI issues, and delivering scalable front-end functionality aligned with product requirements.

BWW Store 🦾

Built BWW Store, a multi-vendor e-commerce application, with Flutter, delivering cross-platform mobile features, responsive layouts, and reusable UI components for a scalable marketplace experience. Integrated payment processing, real-time push notifications using Pusher, authentication with Google, Facebook, and Apple, and OTP-based login and registration, while supporting vendor operations, product discovery, and end-to-end shopping flows.

BWW Seller 🦾

Built BWW Seller, a multi-vendor seller application, with Flutter, enabling vendors to manage products, track orders, and monitor marketplace activity through responsive mobile workflows. Implemented analytics dashboards with charts, OTP-based login and registration, AI-powered analysis features, in-app product creation and management flows, and order tracking functionality, while delivering scalable UI architecture and improving usability for seller operations.

Saytara 🦾

Saytara revolutionizes store management by providing an intuitive platform for controlling employees efficiently and effectively. With Saytara, store managers can seamlessly manage shifts, monitor employee performance in real-time, overcame challenges of offline functionality by implementing local data management for large volumes of data, including images and text., Optimized memory usage and app performance to ensure smooth and fast user experience. Utilized SQLite for efficient local data storage and retrieval

Education

Benha University

Bachelor's Degree in Computer Science

2018 - 2022
